WORK EXPERIENCE

Fresha.com SV Ltd 🔗
SEP 2024 - CURRENT

—— Frontend Engineer

London, UK

Fresha is a global beauty & wellness platform, offering solutions to salons across 120+ countries. Currently working within a cross-functional squad, contributing to the Marketplace sector.

- Key contributor to the Fresha Gift Card launch, leading frontend and supporting API development to enhance Gift card customization and purchase flow.
- Develop and maintain frontend applications using React, Next.js, and TypeScript, ensuring performance, and seamless user experiences. Implement & integrate GraphQL APIs via gateway server, optimizing data fetching and state management.
- Ensured app reliability and maintainability by writing E2E, unit tests, and visual testing using Jest, React Testing Library, Playwright, Storybook as part of feature development and bug fixes.

Freelance 🔗
JAN 2024 - AUG 2024

—— Frontend Development Instructor

Remote

Contracted Frontend Coding Bootcamp Mentor at 「Elice Group」 and 「OZ Coding School」

- Mentor 20+ students in utilising React, React Native, AWS, and more, while teaching JavaScript, TypeScript, Redux and other relevant technologies.
- Conduct comprehensive code reviews and offer valuable feedback on students' projects, while overseeing development of group projects.

Flex 🔗
JUN 2023 - SEP 2023

—— Frontend Engineer (Full-time)

Seongnam, South Korea

Flex is an industry-leading HR platform, offering a SaaS-based HR solution to over 40,000 clients, backed by investment from Greenoaks Capital Management, known for their stakes in global tech leaders like Personio and Discord.

- Elevated user satisfaction within the Employee Time Tracking(Attendance Management) Squad by addressing bugs and VOC feedback, thereby enhancing the product experience in a SaaS environment with intricate domain knowledge.
- Engineered a variety of form components and validations, achieving performance optimization in large forms using React Hook Form.

Ringle English Education Service 🔗
JAN 2021 - JUN 2023

—— Frontend Engineer (Full-time)

Seoul, South Korea

Ringle is a South Korean EdTech leader with £60 million in annual revenue, offers specialised one-on-one English lessons with tutors from top global universities.

- Enhanced page performance in Next.js by implementing Server-Side Rendering(SSR) and Lazy loading, resulting in a 20% reduction in LCP for faster content delivery.

- Spearheaded the development of an in-house Back Office site, automating REST API endpoint/type definitions, which minimised manual coding errors and improved developer experience.
- Optimised deployment processes by enhancing the CircleCI-based CI/CD pipeline. This transitioned from serial to parallel build methods, introduced dependency caching, and optimised monorepo builds, leading to a 35% reduction in CI build lead times.
- Pioneered the integration of AI-driven WebView feature within an app built with React Native, designed for users' English proficiency diagnostics. Successfully implemented a d3.js based chart library for insightful data visualisation of students' language skills.
- Developed an advanced interactive lesson scheduling feature, using Redux for streamlined code and the Scroll & Intersection Observer API for improved UI interaction.
- Successfully transitioned the UI theme from Bootstrap to TailwindCSS, resulting in a 10% reduction in stylesheet loading times, enhancing design flexibility, and boosting overall performance.

MeanSoup Media —— UI Developer (Contractor)
JAN 2021 - JUN 2023

Remote

- Implemented responsive layouts for mobile, tablet, and desktop using HTML5, CSS3(SCSS), and Media Queries, ensuring IE 10+ cross browser compatibility and accessibility on an e-commerce site.
- Utilised Bootstrap and JQuery to construct robust layouts and interactive features, significantly boosting user engagement across various devices on an e-commerce platform.

Samyang Foods 🔗
APR 2015 - JUN 2017

—— Import Specialist

Seoul, South Korea

- Managed import logistics and procurement of raw materials for Buldak Fire Noodles, coordinating end-to-end processes from ordering to payment.
- Developed strategies based on market analysis, optimizing purchasing for key ingredients.
- Administered contracts for essential commodities, including agricultural products and oils.

PROJECTS

Yaho, Hiking Meetup iOS Application
SEP 2021 - DEC 2021

Side Project

- Took the lead in both development and UI design of "Yaho", a React Native based hiking meetup app, successfully overseeing its launch on the App Store in Dec 2021. The app attracted 400+ members and facilitated 50+ meetups.
- Enhanced app agility by implementing CodePush for real-time deployment, significantly reducing the need for frequent App Store updates.
- Architected CRUD logic using Firebase Firestore DB, dynamically managing data, ensuring a responsive and user-friendly app environment.
